#### Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

#### Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team gathered to discuss common financial pain points faced by everyday borrowers. Through open discussion, the group identified that people struggling with loan repayment typically lack three things: an objective view of how serious their situation is, a clear idea of what a fair settlement would look like, and the confidence or writing skill to negotiate with their lender directly.

After comparing several candidate problem areas (budgeting apps, expense trackers, investment tools), the team selected debt recovery as the focus area because it addresses an urgent, high-stakes need with a clear opportunity for AI to add real value — turning raw financial numbers into both an honest assessment and a ready-to-send negotiation letter.

## Define your problem statement

What problem are you trying to solve? Framed as a How Might We statement — the focus of the team's brainstorm.

### PROBLEM

**How might we help borrowers understand the severity of their debt and negotiate a fair settlement with their lender — without hiring an expensive agency or guessing at what to offer?**

### Key rules of brainstorming

To run a smooth and productive session

- Stay on topic.
- Encourage wild ideas.
- Defer judgment.
- Listen to others.
- Go for volume.
- If possible, be visual.

## Step-2: Brainstorm, Idea Listing and Grouping

Each team member contributed ideas independently before the group discussed them together, favoring volume over early judgment. Ideas were then clustered into thematic groups to make prioritization easier.

### Brainstorm & Group Ideas

| Loan Tracking          | Financial Assessment       | Negotiation Support   | Credit Recovery         | Automation                 |
|------------------------|----------------------------|-----------------------|-------------------------|----------------------------|
| Central loan dashboard | EMI-to-income calculator   | AI settlement letters | Credit recovery roadmap | Bank statement auto-detect |
| EMI due-date reminders | Debt-stress score          | Tone-based templates  | Educational content     | Follow-up nudges           |
|                        | Benchmark vs national avg. | Negotiation chatbot   |                         |                            |

## Step-3: Idea Prioritization

Each grouped idea was plotted by Importance (value to the borrower) and Feasibility (how realistic it is to build within the project timeline), to decide what made it into the first release versus what became a future enhancement.

The P0 and P1 ideas above became the platform's three core scenarios: AI-powered settlement recommendation, intelligent negotiation letter generation, and financial health tracking via the dashboard. P2 and P3 ideas were documented as future enhancements rather than discarded, since they remain valuable directions once the core platform is validated.
